

HOW TO BE A CORAL REEF FRIENDLY SCUBA DIVER

BE A BUOYANCY GURU!

Buoyancy is the most important dive skill for protecting the reef, fine tune your buoyancy to avoid damaging the reef.

USE REEF FRIENDLY SUNSCREEN

Chemicals in Sunscreen like Oxybenzone & Octinoxate harm marine life and can kill corals

LOOK, BUT DON'T TOUCH

Picking up or touching marine life; including corals, sea stars and sea cucumber can severely harm them

CAREFUL WITH YOUR FINS

Hitting the reef with your fins will damage fragile marine life like corals and sponges

DON'T CHASE MARINE LIFE

Want to get a good photo? Don't chase marine life, it can cause stress and chase away reef creatures, that have an important role in reef health

LEAVE THE REEF CLEANER

Marine debris contaminates and damages reefs, if possible carefully remove debris during your dives

SUPPORT CONSERVATION

Only dive with operators that promote marine conservation efforts. Donate to marine causes for the future ocean health
